```

Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini libraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue- and pathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention.

N.B. The sequence data for this patent did not form part of the printed as pecification, but was obtained in electronic format directly from MIPO and the property of the printed as the property of the printed as pecification, but was obtained in electronic format directly from MIPO and the property of the printed as the property of the printed as pecification, but was obtained in electronic format directly from MIPO and the property of the printed as the property of the printed as pecification, but was obtained in electronic format directly from MIPO and the property of the printed as the property of the printed and the property of the property of the printed and the property of the property 
New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription
                                                                           WPI; 2002-257383/30.
                                                                                                                         Shoshan A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC transcription units that populate a genome. The library comprises
Cc several oligonucleotides, each capable of hybridising selectively to a
Cc set of messenger RNAs transcribed from a given transcription unit of
Cc the genome, which encodes one or more messenger RNA splice variants.
Cc The oligonucleotide libraries are useful for detecting mRNAs from a
Cc biological sample, in expression profilling studies, in qualitatively or
Cc quantitatively characterising the corresponding transcriptome, and in
Cc detecting RNA transcripts and splice variants of human or animal
Cc transcriptomes. The libraries may also be used as specialised mini
Cc libraries to detect transcripts of a sub-transcriptome under a
Cc particular biological or pathology-specific genes such as those genes
Cc only expressed in specific tissue under a specific pathological
Cc condition; to detect developmental specific genes such as those genes
Cc only expressed in specific tissue under a specific pathological
Cc condition; to detect developmental specific genes; and to detect RNA
Cc transcripts and splice variants of a transcriptome of a patient suffering
Cc from a particular disorder. ABN27253 to ABN9589 represent
Cc oligonucleotide sequences from rats, humans and mice, which are used in
Cc N.B. The sequence data for this patent did not form part of the printed
Cc specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC biological sample, in expression profiling studies, in qualitatively or constitutions and splice variants of human or animal constraints of electring RNA transcripts and splice variants of human or animal constraints to detect transcripts may also be used as specialised minical constraints to detect transcripts of a sub-transcriptome under a constitution of tissue- and pathological state, and so allowing the constraints of electric tissue under a specific pathological constraints of electric transcripts and to detect RNA constitution; to detect developmental specific genes such as those genes condition; to detect developmental specific genes; and to detect RNA constitution; to detect developmental specific genes; and to detect the transcripts and splice variants of a transcriptome of a patient suffering constitution aparticular disorder. ABN27253 to ABN59589 represent colligonucleotide sequences from rats, humans and mice, which are used in the sequence data for this patent did not form part of the printed constitution, but was obtained in electronic format directly from WIPO at the print of the printed constitutions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                     Query Match
                                                                                                                                                                                                                               of hGDMLP-1 protein variants having desired phenotypic improvements, and for expressing the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hGDMLP-1 proteins, as standards in assays used to determine the concentration and/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser desorption ionisation, as therapeutic supplement in patients having specific deficiency in hGDMLP-1 production, and in vaccines or for replacement therapy. The polynuclectide sequences encoding hGDMLP-1 may be used for diagnosing a disorder associated with the expression of hGDMLP-1, in particular heart and skeletal muscle disorders hGDMLP-1 is localised to chromosome 22. The present sequence represents an oligomer used in the screening of the hGDMLP-1 sequence in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30-JAN-2001;
